

1. Sherveer Pannu ssp237 and Rishab Das rrd70
2. We both worked on the client, ts1, ts2, and rs files together. Using the slides from recitation and class were both big helps in the implementation of the sockets.
3. To send the query from we used a try block and if it was empty it would give an error. There also was a problem with input files.
4. Everything is working.
5. The main difficulty was with making the timeout for the socket as per the requirements.
6. One thing we learned from this project was about the difference between blocking and nonblocking sockets. We learned this through the interactions between the servers and seeing how the interactions were affected.
