

1. Sherveer Pannu ssp237 and Rishab Das rrd70
2. We worked on this equally and used the slides from class and recitation to support completing the project.
3. Every single part of the code works how it is supposed to and is tested.
4. We had no difficulties.
5. One observation we saw was with the stop and wait for reliability. When working with the code we saw how this would affect the messages that were displayed by using delays. Another observation was how packet loss occurred and implemented it in the argument line to change our output of the files that were received and how the sender and receiver communicated.
