1. Team Details: Rishab Das(rrd70) and Sherveer Pannu (ssp237)
2. Collaboration: We collaborated with each other on the project and I consulted with my father who is a software engineer for one of the log-in parts.
3. Every part of the code works in the description above.
4. I encounter some difficulties with the extra credit part and with some of the cookie assignments of keeping them saved over new logins.
5. One observation that I learned with cookies in this project is that we use a random value 64bit value to create a token for the cookie. I also observe how we check if it is a good or bad cookie by saving the last username/password in a variable and saving it. I also observe how the cookie token is critical in saving the data that was input.
